

Brandes Global Equity Income Fund

- **Value:** The fund consistently applies a disciplined investment process focused on uncovering companies worldwide with potentially attractive value attributes.
- **Total-Return Focus:** The fund pursues a combination of capital appreciation and income to help investors achieve long-term financial goals.
- **Dividend Income:** The fund seeks to invest in attractively priced companies with a strong history of paying and growing dividends to provide income growth.

Average Annual Total Returns (%) as of 9/30/2019

Source: Brandes, MSCI. Performance data quoted, calculated in USD, represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 800.395.3807. It is not possible to invest directly in an index.

Investment Objective: The Fund seeks long-term capital appreciation and current income by investing primarily in equity securities of U.S. and foreign companies.

Price/Book: price per share divided by book value per share. **Price/Earnings:** price per share divided by earnings per share. **Price/Cash Flow:** price per share divided by cash flow per share. **Active Share:** a measure of the percentage of stock holdings in a manager's portfolio that differ from the benchmark index. **Standard Deviation:** a measure of how much an investment's returns can vary from its average return. **Weighted Average Market Cap:** The weighted average capitalization of the companies based on total securities owned in the portfolio. **Dividend Yield:** calculated by annualizing the last quarterly dividend paid and dividing it by the current share price. The dividend yield is that of the securities held in the portfolio; it is not reflective of the yield distributed to shareholders.

SEC 30-Day Yield: This calculation is based on a 30-day period ending on the last day of the month shown. It is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The yield figure reflects the dividends and interest earned during the period, after the deduction of the fund expenses. A subsidized yield takes into consideration the expenses paid by the Advisor.

The MSCI World Index with net dividends captures large and mid cap representation of developed markets.

Because the values of the Fund's investments will fluctuate with market conditions, so will the value of your investment in the Fund. You could lose money on your investment in the Fund, or the Fund could underperform other investments. The values of the Fund's investments fluctuate in response to the activities of individual companies and general stock market and economic conditions. In addition, the performance of foreign securities depends on the political and economic environments and other overall economic conditions in the countries where the Fund invests. Emerging country markets involve greater risk and volatility than more developed markets. Some emerging markets countries may have fixed or managed currencies that are not free-floating against the U.S. dollar. Certain of these currencies have experienced, and may experience in the future, substantial fluctuations or a steady devaluation relative to the U.S. dollar. Growth stocks typically are more volatile than value stocks; however, value stocks have a lower expected growth rate in earnings and sales.
