It is not possible to invest directly in an index.

Investing involves risk, including potential loss of principal. An investment in the Fund may be subject to risks associated with investing in equity securities, including foreign and value securities risks, issuer risk, and focused investing risk. The Fund may, from time to time, invest a substantial portion of the total value of its assets in securities of issuers located in a particular industry, sector, country or geographic region. During such periods, the Fund may be more susceptible to risks associated with that industry, sector, country, or region. The Fund is an exchange-traded fund and, as a result of this structure, it is exposed to additional trading and transactional risks, limited participant risk, and risks associated with buying and selling shares. The Fund is a recently organized investment company with limited operating history. Please see the prospectus for a discussion of risks.

ETFs are subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of an ETF's shares may trade at a premium or discount to its net asset value, an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact an ETF's ability to sell its shares. Shares of any ETF are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. Brokerage commissions will reduce returns.

Investors should consider the investment objectives, risks, charges and expenses carefully before investing.
