Brandes Global Value Fund

A sub-fund of Brandes Investment Funds Plc

FUND OBJECTIVE

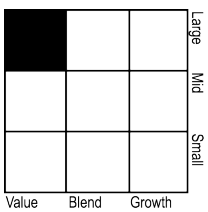

Long-term capital appreciation by investing primarily in global equity securities of issuers listed or traded on Recognised Exchanges whose equity market capitalizations exceed $5 billion at the time of purchase. Suitable for retail investors with a long-term investment horizon (5 years or more) who can tolerate high levels of volatility and the risk of significant capital loss.

The sub-fund is considered to be actively managed in reference to the MSCI World Index by virtue of the fact that it uses the MSCI World Index for performance comparison purposes.

FUND INFORMATION

Total Net Asset Value (mil.)	$526.0

SFDR Classification	Article 8

MORNINGSTAR STYLE BOX™

The Morningstar Style Box™ reveals a fund's investment strategy by showing its investment style and market capitalization based on the fund's portfolio holdings.

BRANDES
INVESTMENT FUNDS PLC

The Brandes Global Value Fund (the "Fund") Class I USD rose 2.27%, outperforming its index, the MSCI World Index, which increased 1.88% in the quarter. The MSCI World Value Index gained 3.84%.

Positive Contributors

The Fund's strongest contributors reflected a reversal of some of the artificial intelligence ("AI")-related trends that drove global markets in the second quarter. Semiconductor performance moderated, while enterprise software, IT services and select health care holdings benefited as investors became more discerning about which businesses may be disrupted by AI and which may use it to strengthen existing products, customer relationships and workflows.

Germany-based enterprise software provider SAP was one of the Fund's largest contributors. The shares recovered as investors became more constructive about the company's cloud transition and less concerned that generative AI would displace its mission-critical applications. SAP's software remains deeply embedded in customers' financial, supply-chain and operational processes, supporting durable relationships and high switching costs. In our view, the company's ability to introduce AI functionality within these established workflows may reinforce the value of its installed base rather than undermine it. We added to the position earlier in the year when investors were more focused on disruption risk.

Several IT services holdings that had declined earlier in the year rebounded during the third quarter, including U.S.-based Cognizant Technology Solutions and EPAM Systems, as well as France-based Capgemini. The reversal reflected improved operating performance in some cases and a broader change in investor sentiment as the market began to distinguish between companies that may be displaced by AI and those positioned to help customers implement, integrate and govern the technology.

We expect AI to change delivery models, productivity assumptions, and pricing structures across the IT services industry, and we remain selective. However, we do not believe the investment implications are uniformly negative. Companies combining industry knowledge, engineering expertise, proprietary customer data and long-standing relationships may continue to provide considerable value as enterprises move from experimentation to broader deployment. The transition from on-premise software to cloud computing initially created similar concerns but ultimately produced implementation and integration opportunities for well-positioned service providers.

Taiwan-based Wiwynn also contributed meaningfully as the company has benefited from continued capital spending by hyperscale customers and demand for computing systems supporting AI applications.

Health care holdings also contributed, led by U.S.-based medical-technology company Becton Dickinson. The company reported solid fiscal third-quarter results and raised its outlook, supported by improved operating performance and execution.

Performance Detractors

The four largest relative detractors were all index holdings in which we do not have a position: Microsoft, Nvidia, Apple, and Meta Platforms. All four performed well and are among the largest weights in the index.

Past performance may not be a reliable guide to future performance. Your capital is at risk.

The detractors within our portfolio holdings were concentrated in the industrial, consumer, and health care sectors.

U.S.-based industrial company Textron declined as investors focused on military-program funding uncertainty and operating pressure in its aviation business, including productivity and margin challenges. We believe these issues are manageable rather than evidence of structural deterioration in Textron's aerospace and defence franchises. The company maintains established aircraft platforms, a substantial installed base, and businesses related to aftermarket demand. We added to the position as the shares declined, and the margin of safety, or discount to our estimate of intrinsic value, improved.

U.S.-based Equifax also detracted. The shares weakened amid investor concerns surrounding the pace of improvement in mortgage-related activity and the timing of a broader recovery in its more cyclical end markets. We recognise that portions of Equifax's business are sensitive to employment, credit, and mortgage activity. However, the company also owns difficult-to-replicate datasets that are embedded in customer decision-making and compliance processes. In our view, these assets, together with the potential for operating leverage as cyclical volumes normalise, continue to support the long-term investment case.

Mexico-based retailer Wal-Mart de Mexico declined as investors assessed softer consumer conditions, increased competitive spending and uncertainty surrounding the regulatory environment in Mexico. France-based luxury goods company Kering remained under pressure as the luxury industry continued to face weak aspirational demand and company-specific execution challenges. U.K.-based pharmaceutical company GSK also detracted. Near-term investor attention remained focused on pipeline execution and the ability of newer medicines and vaccines to offset mature products over time.

Select Activity in the Quarter

Amid wide dispersion across and within sectors and regions, we continued to redeploy capital toward companies where near-term uncertainty appeared to offer favourable long-term risk-reward profiles. During the quarter, we initiated positions in India-based HDFC Bank, France-based luxury goods company LVMH, and U.S.-based companies Omnicom Group and Intercontinental Exchange. We completed the sales of Emerson Electric, Genting Berhad and Topsports International.

HDFC Bank is India's largest private bank and has a broad deposit and distribution franchise. The company has historically maintained strong asset quality through conservative underwriting, meaningful capital ratios, and disciplined risk management. The shares had been affected by the profitability and margin pressure following the 2023 merger with parent company HDFC Limited, whose funding base relied more heavily on higher-cost wholesale debt. Management has subsequently been reconfiguring the combined balance sheet, replacing borrowings with deposits and reducing the elevated loan-to-deposit ratio.

We believe HDFC Bank's scale, deposit franchise, capital position and asset-quality record should allow profitability to improve as funding costs normalise and the integration-related drag recedes. The bank has also invested in distribution and technology, creating the potential for improved operating leverage over time. We established the position based on HDFC Bank's company-specific recovery potential and franchise quality.

France-based LVMH is the world's largest luxury goods group, comprising more than 75 brands across fashion and leather goods, watches and jewellery, perfumes and cosmetics, wines and spirits, and selective retailing. Its leading assets include Louis Vuitton, Dior, Tiffany, Bulgari, and Sephora. The shares had weakened as luxury demand slowed, particularly among aspirational consumers, and investors questioned whether Louis Vuitton could continue to gain share on top of an already dominant industry position.

We agree that near-term growth is likely to be more subdued than the rates experienced following the pandemic and do not assume a rapid return to historical growth. Nevertheless, LVMH owns an exceptional collection of brands supported by significant marketing resources, vertical integration, global distribution, and long-term creative investment. Sephora continues to benefit from share gains in prestige beauty, while the jewellery and watches businesses provide greater exposure to higher-income consumers. At our purchase price, we believe the valuation more than reflected the risk of slower growth while providing recovery potential if luxury demand stabilises, and the company maintains its competitive position.

We also initiated a position in U.S.-based Omnicom Group, one of the world's largest advertising agency holding companies. Omnicom owns major creative, media and communications businesses and completed its acquisition of Interpublic in late 2025. The transaction increased Omnicom's scale in media buying and expanded its digital and data capabilities, but it also created significant integration complexity.

The shares had been out of favour because investors were concerned that the integration could lead to client and employee attrition, while uncertainty surrounding financial disclosure, asset sales and the timing of cost savings reduced earnings visibility. AI has also raised questions about the future economics of creative production and

agency services. We believe these concerns are understandable, and our expectations incorporate revenue attrition and a gradual integration process. However, we believe the combination should leave Omnicom with significant global scale, improved capabilities, and a strong position relative to several weakened competitors. Its cash generation and management's focus on capital returns could also support meaningful share repurchases. In our view, the valuation provided an attractive margin of safety using what we believe are realistic assumptions for synergy and earnings expectations.

Intercontinental Exchange operates exchanges and clearing platforms and provides fixed-income data and mortgage technology. Its exchange businesses generate strong cash flow, while its data and mortgage-technology operations increase the proportion of recurring revenue across the company.

The shares had been pressured by concerns regarding normalisation of unusually strong trading activity, the potential impact of AI on financial data and mortgage technology, and competition from alternative market structures and products. We believe the concern surrounding cyclical normalisation is reasonable, and our valuation assumes exchange activity below recent elevated levels. However, we believe investors have become too pessimistic about the durability of Intercontinental Exchange's competitive position.

Its exchanges benefit from liquidity, network effects, and integration into institutional workflows. Within mortgage technology, its platforms connect origination, processing, underwriting, servicing, investors, and regulators. Although AI may automate individual tasks, financial institutions should continue to require centralised systems that maintain data integrity, governance, compliance, and accountability. In our view, Intercontinental Exchange owns a collection of businesses with strong free-cash-flow generation and competitive advantages. Its valuation at purchase offered an attractive margin of safety based on normalised rather than peak exchange activity.

We completed the sale of U.S.-based industrial company Emerson Electric following strong appreciation and a narrowing of its discount to our estimate of intrinsic value. We also exited Malaysia-based Genting Berhad and China-based Topsports International as changes in our assessment of their risk-reward profiles made other opportunities more attractive.

Year-to-Date Briefing

For the nine months ended 30 September 2026, the Fund returned 4.53%, underperforming the MSCI World Index, which returned 11.75%. The MSCI World Value Index gained 14.74%.

Global markets experienced several shifts in leadership during the period. In the first quarter, value stocks benefited from a pullback in technology and stronger performance from energy and other cyclical businesses. During the second quarter, market leadership became increasingly concentrated in semiconductor manufacturers, and technology-hardware companies perceived to be direct beneficiaries of accelerating AI-related capital spending. In the third quarter, that trend moderated as software and IT services businesses recovered, and investors became more selective about expected returns from elevated infrastructure investment.

At the Fund level, the strongest year-to-date contributors included several AI-related beneficiaries including South Korea-based Samsung Electronics, Taiwan Semiconductor Manufacturing Company (TSMC), Wiwynn, and U.S.-based Micron Technology. Samsung, TSMC and Wiwynn benefited from demand linked to semiconductor, memory, and AI-infrastructure spending, although we reduced technology exposure as valuations appreciated and margins of safety narrowed. Energy holdings, TotalEnergies and Shell, benefited from commodity-price strength, disciplined capital allocation, and healthy cash generation.

The Fund's largest year-to-date detractors were our exposures in, and our significant underweight to the technology sector. Technology has grown to over 30% of the index, and the sector has driven the majority of year-to-date returns. Detractors included IT services companies EPAM Systems, Capgemini, Amdocs, and Cognizant, despite their third quarter rebound. Other detractors included Alibaba, Kering and Wal-Mart de Mexico. Relative performance was also affected by the Fund's limited or absent exposure to several of the largest technology companies in the MSCI World Index, including Nvidia, Apple, and Advanced Micro Devices.

Current Positioning

The Fund remains meaningfully differentiated from the MSCI World Index. Market performance has become increasingly influenced by a relatively small number of technology companies, particularly those associated with AI infrastructure. Although the Fund has participated through holdings such as Wiwynn and select other semiconductor and technology companies, we have reduced exposure to holdings where share-price appreciation narrowed our estimates of margin of safety.

Technology remains a significant underweight relative to the index, but we continue to identify selective opportunities in enterprise software, IT services, financial data, and other technology-adjacent businesses. In each case, the investment thesis rests on embedded workflows, proprietary datasets, high switching costs, necessary infrastructure, or durable customer relationships rather than aggressive assumptions about the scale and profitability of AI-related spending.

Past performance may not be a reliable guide to future performance. Your capital is at risk.

Health care remains an important source of opportunity. Regulatory uncertainty, pipeline concerns, and company-specific execution issues have weighed on parts of the sector, but we continue to find companies with recurring demand, established competitive positions and attractive long-term cash-flow potential. The Fund also maintains meaningful exposure to financials, where recent additions include HDFC Bank and Intercontinental Exchange. We believe these businesses offer differentiated sources of return through established franchises, embedded infrastructure, and opportunities for company-specific improvement.

Consumer holdings range from defensive franchises to businesses experiencing cyclical or company-specific pressure. The purchase of LVMH added a collection of globally recognised brands at a valuation that, in our view, more appropriately reflected slower growth of near-term luxury demand.

Geographically, we continue to find opportunities across Europe and select emerging markets, while maintaining our underweight to companies domiciled in the U.S.

We believe uncertainty surrounding inflation, interest rates, geopolitics, and technological disruption is contributing to wide valuation dispersion across global markets. While AI may reshape the economics of numerous industries, we do not believe every perceived beneficiary will earn attractive returns at any price, nor that every incumbent facing potential disruption is structurally impaired. Our focus remains on purchasing businesses where competitive position, cash-flow durability, and valuation provide an attractive margin of safety.

In our view, the Fund combines defensive franchises with select cyclical and company-specific recovery opportunities and offers meaningful diversification from highly concentrated passive and growth-oriented exposures. We continue to find companies whose near-term challenges appear adequately reflected in their valuations while their long-term ability to generate attractive returns on capital remains underappreciated. We believe this provides an attractive risk-reward profile for patient investors.

Past performance may not be a reliable guide to future performance. Your capital is at risk.

[1]Based on the actual expenses over the trailing twelve month period ended 9/30/2026. [2]Out of 603 Global Large-Cap Value Equity funds as of 9/30/2026.

Class I Shares will generally be offered to institutional investors only, as determined by the fund's directors in their absolute discretion. The minimum initial subscription applicable to Class I Shares is $1 million or its equivalent in another currency, save for Class I Shares with a GBP denominated currency for which there is a minimum initial subscription of £10,000.

Class A Shares may be offered by appointed distributors only. The minimum initial subscription applicable to A Shares is $10,000 or its equivalent in another currency. A distribution fee of up to 1% of the net asset value of the relevant Class A Shares shall be payable out of the assets of the share class to the distributors.

Class I1 and A1 Shares are distributing share classes. Distributions are paid on an annual basis with the record date being the last business day of the calendar year.

This Fund promotes environmental and/or social characteristics and is classified as an Article 8 fund under the EU's Sustainable Finance Disclosure Regulation ("SFDR").

Additional Information for French investors: *Investors should note that, relative to the expectations of the Autorité des Marchés Financiers, this UCITS presents disproportionate communication on the consideration of non-financial criteria in its investment policy.*

MSCI has not approved, reviewed or produced this report, makes no express or implied warranties or representations and is not liable whatsoever for any data in the report. You may not redistribute the MSCI data or use it as a basis for other indices or investment products. ©2026 Morningstar, Inc. All rights reserved. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed: and (3) is not warranted to be accurate, complete, or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar RatingTM for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Brandes Global Value Fund was rated against the following numbers of Global Large-Cap Value Equity funds over the following time periods: 603 funds in the last three years, and 491 funds in the last five years, and 345 funds in the last ten years.
